Mammography is a x-ray exam of breast tissue. The image produced is called a Mammogram. A Mammogram can help detect problems with your breasts, such as cysts or cancer.

Before Your Test

- ◆ Schedule the test for one week after your period, when your breasts are less tender
- ◆ Make sure you get your last Mammogram, this helps the doctor for comparing.
- ◆ On the morning of your test, wash your breasts and underarms, but don't use deodorant, powder, or perfume.
- ◆ Wear a top that you can remove easily.

During Your Test

- ◆ You will need to undress from the waist up.
- ◆ The technologist will position your breast to get the best test results.
- ◆ Each of your breasts will be compressed. This helps get the most complete x-ray image.

After Your Test

- ◆ More x-rays are sometimes needed. You'll be called again if required.

- ◆ Breast Sonography may also be required.
- ◆ Have Mammograms as often as your doctor recommends. Also be sure to do regular breast self-exams.

8 out of 10 Breast lumps are benign & harmless

Age	35 to 39	40 to 49	50 & above
Breast Self Examination	Monthly	Monthly	Monthly
Examination by your Doctor	2 to 3 yrs	1 to 2 yrs	Yearly
Mammogram	Baseline	1 to 2 yrs	Yearly

Recommended by American Cancer Society.

Let the technologist know if :

- You're Pregnant or think you may be.
- You have breast implants.
- You have any scars or moles on or near your breasts.
- You've had a breast biopsy or surgery.
- You're breastfeeding.

Mammography

These Circles Represent the Size of a Lump That Might Be Found :

by a woman who rarely examines her own breasts.

by a woman who occasionally examines her own breasts.

by a woman who examines her own breasts every month.

by a doctor or nurse giving a clinical breast exam.

on a woman's first Mammogram

by getting Mammograms every 1-2 years

So, earlier the Diagnosis better the cure
